

Wallpaper Hanging Guide

We recommend this product is only hung by persons competent in DIY. Before hanging this wallpaper, please check that all rolls are undamaged, batch numbers are the same and that the design and colours all match. Please return any defective roll, complete with packaging, so the batch can be identified. The wallpaper will need to be trimmed with a sharp decorating knife during the hanging process. Take extra care when papering around electric light switches and power points. Do not allow any moisture to drop onto electrical contacts.

Before Hanging

Prepare walls by removing all traces of dirt, old wallpaper or loose paint. Do not hang wall coverings on any wall with a history of damp. Fill any cracks and allow to dry before hanging. Absorbent surfaces should be appropriately sized using diluted wallpaper adhesive. Sealed walls i.e. painted, should be rubbed with sandpaper to create a 'key'. It is important that the walls are of an even and consistent colour. If they are not, then consideration should be given to painting them with a suitable colour wash prior to hanging the wallpaper. Alternatively we recommend walls should be 'lined' horizontally using a good quality lining paper. Allow this to dry fully.

Hanging:

We recommend the use of a light ready mixed adhesive. Evenly apply the adhesive directly onto the walling a brush or a short pile emulsion roller, then apply the first section of wall covering to the wall, smooth down with a good quality hanging brush. If your wall is shorter than 3m in height, trim either top or bottom of each wallpaper panel accordingly with a sharp decorator's knife. Apply the paste to the next section of the wall and apply the second panel with the edges butted together, making sure to match the design, (pre-trimming just down the edge of the printed image will help with alignment during the overlapping stage).

CAREFULLY WIPE ANY EXCESS PASTE FROM THE FACE OF THE PAPER IMMEDIATELY WITH A CLEAN DAMP SPONGE BEFORE IT DRIES. After hanging 3 lengths inspect to ensure there is no shading or other fault.
